Important notes about cylinder styli

Cylinder styli are used for edge probing, for instance, the edges of stampings and thin sheet metal parts. Cylinder styli are not suitable for high accuracy work because the form of a cylinder is not as precise as a sphere. Please contact us with any questions about how to calibrate or use cylinder styli.

Important notes about cylinder styli

Cylinder styli are used for edge probing, for instance, the edges of stampings and thin sheet metal parts. Cylinder styli are not suitable for high accuracy work because the form of a cylinder is not as precise as a sphere. Please contact us with any questions about how to calibrate or use cylinder styli.

Important notes about cylinder styli

Cylinder styli are used for edge probing, for instance, the edges of stampings and thin sheet metal parts. Cylinder styli are not suitable for high accuracy work because the form of a cylinder is not as precise as a sphere. Please contact us with any questions about how to calibrate or use cylinder styli.

Thread card

End the guesswork over the correct thread and ball sizes for your probe systems. Our exclusive thread card has ten different tapped holes between M2 and 3/8-24 UNF to check thread sizes, and ten holes from 1.0 mm to 6.0 mm diameter to gage ball sizes. A built-in 40.0 mm long scale is helpful for estimating probe lengths.

We make these from aircraft-grade aluminum. They are machined, red anodized, and laser engraved. About the size of a playing card, they are approximately 75.0 mm long x 50.0 mm wide x 3.0 mm thick.

A protective slip cover (shown) is included.
